Benefits for Researchers

- Enables authors, not editors, to decide what they wish to publish.
- Articles can be published open access in a professional layout within a few days.
- Invited peer review is author-led and fully open.
- All types of research outputs are encouraged, from research articles to null/negative results, small findings, case reports, data notes and others, providing credit for all of your work.
Why I chose to publish with F1000Research

I have now published three manuscripts with F1000Research

It has been a pleasurable experience every time. This is like night and day compared to many other scientific journals in which I have published, be they open or closed access. If it were just for me, I would never dream of publishing my scientific papers anywhere else...ever!

The advantage of the open refereeing process becomes completely obvious once you have experienced it

When referees comment openly on a paper that is already published, they suddenly become much more constructive and helpful.

I would recommend publishing with F1000Research

I spend a fair bit of time trying to convince my colleagues to do themselves a favour and to try submitting one of their next papers to F1000Research. They could see their papers published in a matter of days.

Etienne Joly
IPBS, CNRS, Université de Toulouse, Toulouse, France

Etienne Joly is a research scientist at INSERM and has been a fervent advocate of the evolution of scientific publishing towards open access.

Over the years he has had many research interests, including the biology of MHC class I molecules, neuro-immuno-genetics, membrane biophysics and evolution, with a particular interest in speciation.

He has eagerly contributed as an editorial board member to publishing platforms with innovative approaches such as PLOS ONE, Biology Direct, F1000Prime and F1000Research.
